

The response message for [Locations.ListLocations](#)

(/automl/docs/reference/rest/v1beta1/projects.locations/list#google.cloud.location.Locations.ListLocations)

.

JSON representation

Fields

locations[]	object (<u>Location</u> (/automl/docs/reference/rest/Shared.Types/ListLocationsResponse#Location)) A list of locations that matches the specified filter in the request.
nextPageToken	string The standard List next-page token.

A resource that represents Google Cloud Platform location.

JSON representation

JSON representation

Fields

name	string Resource name for the location, which may vary between implementations. For example: "projects/example-project/locations/us-east1"
locationId	string The canonical id for this location. For example: "us-east1".
displayName	string The friendly name for this location, typically a nearby city name. For example, "Tokyo".
labels	map (key: string, value: string) Cross-service attributes for the location. For example

Fields

metadata

object

Service-specific metadata. For example the available capacity at the given location.

An object containing fields of an arbitrary type. An additional field `"@type"` contains a URI identifying the type. Example: `{ "id": 1234, "@type": "types.example.com/standard/id" }`.
