# Cisco and Google Cloud have a complete set of assets for any IT challenge

## Benefits

### Multi-cloud orchestration and management

Policy-based orchestration and life cycle management of resources, applications, and services across hybrid environments.

### Enterprise-grade networking and security

Network policies and configurations for multiple on-premises and cloud environments helping to mitigate security risks.

### Visibility and control

Extensive security policies and real-time network and application performance monitoring proactively managing potential threat vectors.

## Cloud-ready infrastructure built to scale

A hyperconverged platform supporting existing applications and cloud-native Kubernetes environments, built to scale seamlessly.

## Multi-cloud service management with Istio

Open source solution for connecting, securing, managing, and monitoring microservices.

## API management

Enterprise-class API management enabling legacy workloads running on-premises to connect to the cloud.
