

# Quickstart using a Linux VM

This page explains how to create a Linux virtual machine instance in Compute Engine using the Google Cloud Console.

## Before you begin

1. [Sign in](https://accounts.google.com/Login) (https://accounts.google.com/Login) to your Google Account.

If you don't already have one, [sign up for a new account](https://accounts.google.com/SignUp) (https://accounts.google.com/SignUp).

2. In the Cloud Console, on the project selector page, select or create a Cloud project.

★ **Note:** If you don't plan to keep the resources that you create in this procedure, create a project instead of selecting an existing project. After you finish these steps, you can delete the project, removing all resources associated with the project.

[Go to the project selector page](https://console.cloud.google.com/projectselector2/home/dashboard) (https://console.cloud.google.com/projectselector2/home/dashboard)

3. Make sure that billing is enabled for your Google Cloud project. [Learn how to confirm billing is enabled for your project](/billing/docs/how-to/modify-project) (/billing/docs/how-to/modify-project).
4. Enable the Compute Engine API.

[Enable the API](https://console.cloud.google.com/apis/api/compute.googleapis.com/overview) (https://console.cloud.google.com/apis/api/compute.googleapis.com/overview)

## Create a virtual machine instance

1. In the Cloud Console, go to the **VM Instances** page.

[Go to the VM Instances page](https://console.cloud.google.com/compute/instances) (https://console.cloud.google.com/compute/instances)

2. Click **Create instance**.
3. In the **Boot disk** section, click **Change** to begin configuring your boot disk.

4. On the **Public images** tab, choose **Debian version 9**.
5. Click **Select**.
6. In the **Firewall** section, select **Allow HTTP traffic**.
7. Click **Create** to create the instance.

**Name** [?](#)

**Region** [?](#) **Zone** [?](#)

us-east1 (South Carolina) us-east1-b

**Machine type**  
Customize to select cores, memory and GPUs.

1 vCPU 3.75 GB memory [Customize](#)

**Container** [?](#)

Deploy a container image to this VM instance. [Learn more](#)

**Boot disk** [?](#)

 New 10 GB standard persistent disk  
Image  
Google Drawfork Debian GNU/Linux 9 [Change](#)

**Identity and API access** [?](#)

**Service account** [?](#)

Compute Engine default service account

**Access scopes** [?](#)

Allow default access  
 Allow full access to all Cloud APIs  
 Set access for each API

**Firewall** [?](#)  
Add tags and firewall rules to allow specific network traffic from the Internet

Allow HTTP traffic  
 Allow HTTPS traffic

[Management, security, disks, networking, sole tenancy](#)

---

You will be billed for this instance. [Compute Engine pricing](#) [↗](#)

[Create](#) [Cancel](#)

Equivalent [REST](#) or [command line](#)

Allow a short time for the instance to start. After the instance is ready, it is listed on the **VM instances** page with a green status icon.

## Connect to your instance

1. In the Cloud Console, go to the **VM instances** page.

[Go to the VM instances page](https://console.cloud.google.com/compute/instances) (https://console.cloud.google.com/compute/instances)

2. In the list of virtual machine instances, click **SSH** in the row of the instance that you want to connect to.

| <input type="checkbox"/> | Name ^   | Zone       | Recommendation | Internal IP       | External IP  | Connect        |
|--------------------------|--|------------|----------------|-------------------|--|----------------|
| <input type="checkbox"/> |  instance-1 | us-east1-b |                | 10.142.0.2 (nic0) | 35.231.114.114  | <b>SSH</b> ▾ ⋮ |

You now have a terminal window for interacting with your Linux instance.

## Clean up

To avoid incurring charges to your Google Cloud account for the resources used in this quickstart, follow these steps.

1. In the Google Cloud Console, go to the **VM instances** page.

[Go to the VM instances page](https://console.cloud.google.com/compute/instances) (https://console.cloud.google.com/compute/instances)

2. Click the name of the instance you created.
3. At the top of the instance's details page, click **Delete**.

## What's next

- Work through a tutorial to [Set up a basic web server](/compute/docs/tutorials/basic-webserver-apache) (/compute/docs/tutorials/basic-webserver-apache) on your new instance.
- Work through a guided [Getting started tutorial](https://console.cloud.google.com/start?tutorial=compute_short_quickstart) (https://console.cloud.google.com/start?tutorial=compute\_short\_quickstart) in the Google Cloud Console.

- Work through [Managing Google Cloud projects with Terraform](#) (/community/tutorials/managing-gcp-projects-with-terraform) tutorial.
- Learn how to [create and manage virtual machine instances](#) (/compute/docs/instances/create-start-instance) using the `gcloud` command-line tool and API.
- Learn more about the [Linux images available on Compute Engine](#) (/compute/docs/images#os-compute-support).
- Learn how to [Transfer your files to your instance](#) (/compute/docs/instances/transfer-files).
