Work with Google experts

When you choose a Google Cloud consultant, you'll be working hand in hand with experts who will educate your team on best practices and guiding principles for a successful implementation.

Our deep technical expertise and services help you unlock business value from the cloud across a range of solutions—including infrastructure, application modernization, data management and analytics, machine learning, security, and more.

“ The personal attention given to us by the Google account and Professional Services teams went far beyond what I expected, especially from a company of that size. ”

— Andra Milender, Chief Technology Officer of Architecture and Engineering, Global Payments Inc.

Our methodology

Leverage the experience of our professional services
consultants and our proven implementation methodology.

Assess

Concepts | Experiments | Feasibility

(Optional phase) Determine use case, explore high-level
solutions, and test a solution through experiments. Gain
confidence to move forward with a Cloud project to realize the
solution.

Plan

Detailed design | Implementation plan

Develop a detailed architecture design and deployment plan—
comprehensively scoped to implement the solution and
execute on the detailed design and plan documents.

Deploy

Execution | Migration | Expansion

Execute on the detailed design and plan documents created
during the previous plan phase. Realize solution in production.

Optimize

Operations | Review | Enhancement

After implementation, look for ways to establish operational
best practices. In the steady state, look for opportunities to
review and enhance existing processes and technologies.
