

To administer your Datastore mode instance using the Google Cloud Console, go to the [Datastore](https://console.cloud.google.com/project/_/datastore) (https://console.cloud.google.com/project/_/datastore) page to perform the desired administrative functions:

- Use the **Dashboard** page to get an overview of your usage. Datastore mode databases maintain statistics about the data stored for an application such as how many entities there are of a given kind or how much space is used by property values of a given type.
- Use the **Entities** page to view entities by namespace and run queries.
- Use the **Indexes** page to view indexes and their serving status.
- Use the **Admin** page to enable Datastore administration so you can back up, restore, copy or delete entities in bulk. You can also disable writes to your Datastore instance.

- For information on Datastore mode limits, see [Limits](/datastore/docs/concepts/limits) (/datastore/docs/concepts/limits).
- For information on Datastore mode quotas, see [Pricing and Quota](/datastore/docs/pricing) (/datastore/docs/pricing).
