
Use this topic to learn how to delete a Cloud Filestore instance.

If you want to use the command-line examples in this topic, enable the `gcloud` command-line tool by [installing the Cloud SDK](#) (/sdk/downloads).

Warning: Deleting a Cloud Filestore instance deletes all data on that instance. Deleting an instance can't be undone.

Use one of the following procedures to create a Cloud Filestore instance.

- Create a different instance (/filestore/docs/creating-instances).
