

- **Expr** (/iap/docs/reference/rpc/google.type#google.type.Expr) (message)

Represents an expression text. Example:

Fields

expression	string Textual representation of an expression in Common Expression Language syntax. The application context of the containing message determines which well-known feature set of CEL is supported.
title	string An optional title for the expression, i.e. a short string describing its purpose. This can be used e.g. in UIs which allow to enter the expression.
description	string An optional description of the expression. This is a longer text which describes the expression, e.g. when hovered over it in a UI.

Fields

location

string

An optional string indicating the location of the expression for error reporting, e.g. a file name and a position in the file.
