

# Cloud Logging documentation

Cloud Logging allows you to store, search, analyze, monitor, and alert on log data and events from Google Cloud and Amazon Web Services. Using the [BindPlane service](#) (<https://bluemedora.com/products/bindplane/bindplane-for-stackdriver/>), you can also collect this data from over 150 common application components, on-premises systems, and hybrid cloud systems. BindPlane is included with your Google Cloud project at no additional cost.

## Quickstarts
