

Stackdriver Monitoring in the Cloud Console is now Generally Available (GA) and the default option. For a limited period, you also have the option to use the classic Stackdriver Monitoring console. Choose the set of instructions that applies to your choice of console:

[Using the Google Cloud Console \(GA\) \(#gcp\\_console\)](#)

[Using the Stackdriver Monitoring console \(classic, GA\) \(#monitoring\\_console\)](#)

For more information, see [Monitoring in the Cloud Console \(/monitoring/docs/monitoring\\_in\\_console\)](#).

You can share a chart with others by sending them a parameterized URL.

To create a parameterized URL for a chart on Metrics Explorer, click **Other options**  and then select **Share by URL**. You are given a dialog similar to the following:

You can copy the link and paste it into an email, a browser, or another application.

Charts built with Metrics Explorer have auto-refresh turned on by default. When you share the chart, auto-refresh is turned off by default so that the shared chart reflects the data at the time when the chart was made. You can edit the URL to change the auto-refresh behavior. Look for the **isAutoRefresh** substring in the URL.

To create a sharing URL for a chart on a dashboard:

1. Click **Other options**  and then select **Share**. You are given an HTML snippet for an iframe.
2. Copy the iframe HTML snippet to any website or application that permits it.

3. If desired, change the size or other properties of the embedded chart using query parameters in the URL source for the iframe. Following are some special query parameters:

- **timeframe**: If you want a time frame other than the default, specify the `timeframe=<val>` parameter, where `<val>` can be `1h` for one hour, `6h` for six hours, `1d` for one day, `1w` for one week, `1M` for one month, or `6w` for six weeks.
- **autoRefresh**: If you want your chart to refresh automatically, add `autoRefresh=true` to your query string parameters.

4. Click the **Close** button to dismiss the box.

When you share a chart by URL, you are sharing an active chart. To take a static screenshot of a chart, click **Other options** and select **Download PNG**.

To see a list of all shared charts, click **Settings** and select the **Public charts** tab.

To stop sharing a chart, do the following:

1. Click **Settings** and select the **Public charts** tab.
2. On the line that identifies the chart, click **More options**  and then select **Unshare**.

You can share a chart with others by sending them a parameterized URL.

To create a parameterized URL for a chart on the Metrics Explorer:

1. Click **Other options**, , above the Y-axis on the chart.
2. Click **Share by URL**. After you click **Share by URL**, a dialog similar to the following is displayed.

A screenshot of a web interface showing a text input field containing the URL 'https://app.google.stackdriver.c' and a blue button labeled 'Copy Link' to its right.

You can copy the link and paste it into an email, a browser, or another application.

To see a list of all shared charts, go to **Dashboards > Public charts**. You can copy the link for any chart and paste it into an email, a browser, or another application. From this page you can also stop sharing a particular chart.

Charts built with Metrics Explorer have auto-refresh turned on by default. When you share the chart, auto-refresh is the default so that the shared chart reflects the data at the time when the chart was made. You can edit the URL to check for the **isAutoRefresh** substring in the URL.

To create a sharing URL for a chart on a dashboard:

1. Click **Other options**,  , above the Y-axis on the chart.
2. Click **Share**. You are given an HTML snippet for an iframe.
3. Copy the iframe HTML snippet to any website or application that permits it.
4. If desired, change the size or other properties of the embedded chart using query parameters in the URL source for the iframe. Following are some special query parameters:
  - **timeframe**: If you want a time frame other than the default, specify the `timeframe=<val>` parameter, where `<val>` can be `1h` for one hour, `6h` for six hours, `1d` for one day, `1w` for one week, `1M` for one month, or `6w` for six weeks.
  - **autoRefresh**: If you want your chart to refresh automatically, add `autoRefresh=true` to your query string parameters.
