# Protecting Projects from Accidental Deletion with Liens

This document is for [Project owners](#)

([https://cloud.google.com/resource-manager/docs/access-control-proj#permissions\\_and\\_roles](https://cloud.google.com/resource-manager/docs/access-control-proj#permissions_and_roles)) and

[Organization administrators](#)

([https://cloud.google.com/resource-manager/docs/access-control-org#permissions\\_and\\_roles](https://cloud.google.com/resource-manager/docs/access-control-org#permissions_and_roles)) looking to add protections against project deletion.

You can place a lien upon a project to block the project's deletion until you remove the lien. This can be useful to protect projects of particular importance.

The `gcloud` command line tool is the easiest way to interact with project liens. If you don't have it installed, you can use [Google Cloud Shell](#) (<https://cloud.google.com/shell/docs/>).

## Placing a lien on a project

To place a lien on a project, a user must have the `resourcemanager.projects.updateLiens` permission which is granted by the `roles/owner` and `roles/resourcemanager.LienModifier` roles.

```
gcloud alpha resource-manager liens create \  
  --restrictions=resourcemanager.projects.delete \  
  --reason="Super important production system"
```

The available parameters to `liens create` are:

- `--project` - The project the lien applies to.
- `--restrictions` - A comma-separated list of IAM permissions to block.
- `--reason` - A human-readable description of why this lien exists.
- `--origin` - A short string denoting the user/system which originated the lien. Required, but the `gcloud` tool will automatically populate it with the user's email address if left out.

At present, the only valid restriction for a project is `resourcemanager.projects.delete`.

## Listing liens on a project

To list liens applied to a project, a user must have the `resourcemanager.projects.get` permission. Use the `liens list gcloud` command.

```
gcloud alpha resource-manager liens list
```

Here is some example output for this command:

```
gcloud alpha resource-manager liens list
```

NAME	ORIGIN	REASON
p1061081023732-13d8032b3-ea2c-4683-ad48-5ca23ddd00e7	user@example.com	testing

## Removing liens from a project

To remove a lien from a project, a user must have the `resourcemanager.projects.updateLiens` permission which is granted by `roles/owner` and `roles/resourcemanager.lienModifier`.

```
gcloud alpha resource-manager liens delete [LIEN_NAME]
```

where:

- *[LIEN\_NAME]* is the name of the lien to be deleted.
