For installations completed using an OS package (such as **apt-get**, **yum**, etc.), uninstall Cloud SDK via the OS packa
ger.

To completely remove Cloud SDK, follow these instructions:

1. Locate your installation directory by running:

   Locate your user config directory (typically `~/.config/gcloud` on MacOS and Linux) by running:

2. Delete both these directories.

3. Additionally, remove lines sourcing `completion.bash.inc` and `paths.bash.inc` in your `.bashrc` or equivalent shell init file, if you added them during installation.
