

Result containing the properties and count of a groupBy request.

JSON representation

Fields

properties

map (key: string, value: value ([Value](https://developers.google.com/protocol-buffers/docs/reference/google.protobuf#google.protobuf.Value) format))

Properties matching the groupBy fields in the request.

An object containing a list of "key": value pairs. Example: { "name": "wrench", "mass": "1.3kg", "count": "3" }.

count

string ([int64](https://developers.google.com/discovery/v1/type-format) format)

Total count of resources for the given properties.
