This page shows you how to make objects you own readable to everyone on the public internet. To learn how to access data that has been made public, see Accessing Public Data (/storage/docs/access-public-data).

When an object is shared publicly, any user with knowledge of the object URI can access the object for as long as the ic.

n: If you have uniform bucket-level access (/storage/docs/uniform-bucket-level-access) enabled on your bucket, you t use these steps. Instead, grant public readability at the bucket level (#buckets), or use signed URLs age/docs/access-control/signed-urls).

To make individual objects readable to everyone on the public internet:

To make all objects in a bucket readable to everyone on the public internet:

roles/storage.objectViewer includes permission to list the objects in the bucket. If you don't want to grant listin
y, use **roles/storage.legacyObjectReader** (/storage/docs/access-control/iam-roles#legacy-roles).

- Access data that has been made public (/storage/docs/access-public-data).
- Learn about more access control options (/storage/docs/access-control/) for your buckets and objects.
