
This page shows you how to delete objects from your buckets in Cloud Storage. For an overview of objects, read the [Key Terms \(/storage/docs/key-terms#objects\)](/storage/docs/key-terms#objects).

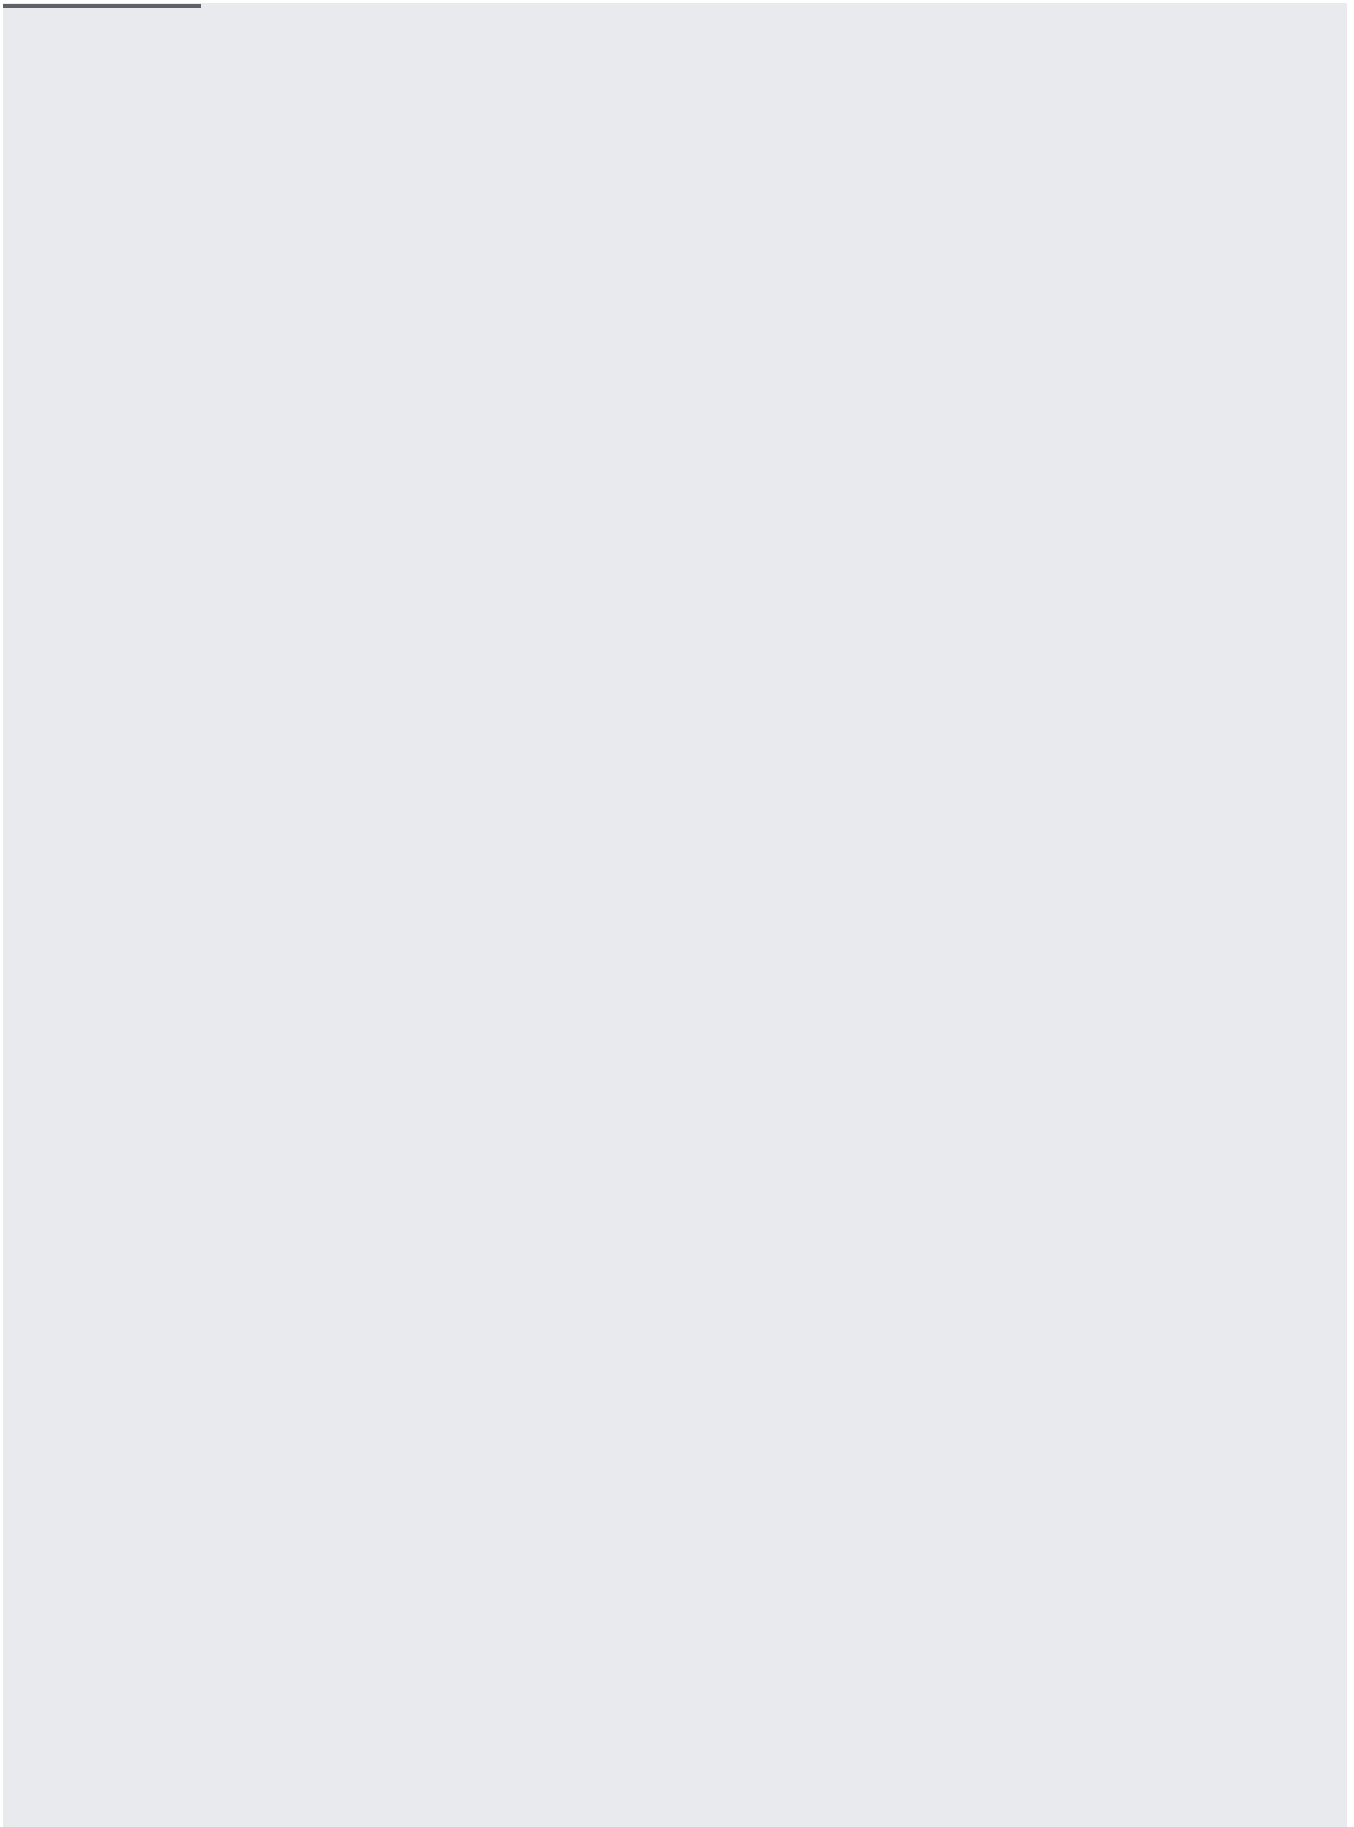

Warning: Object deletion cannot be undone. Cloud Storage is designed to give developers a high amount of flexibility and control over their data, and Google maintains strict controls over the processing and purging of deleted data. To protect yourself from data loss, see [Deleting data best practices \(/storage/docs/best-practices#deleting\)](/storage/docs/best-practices#deleting).

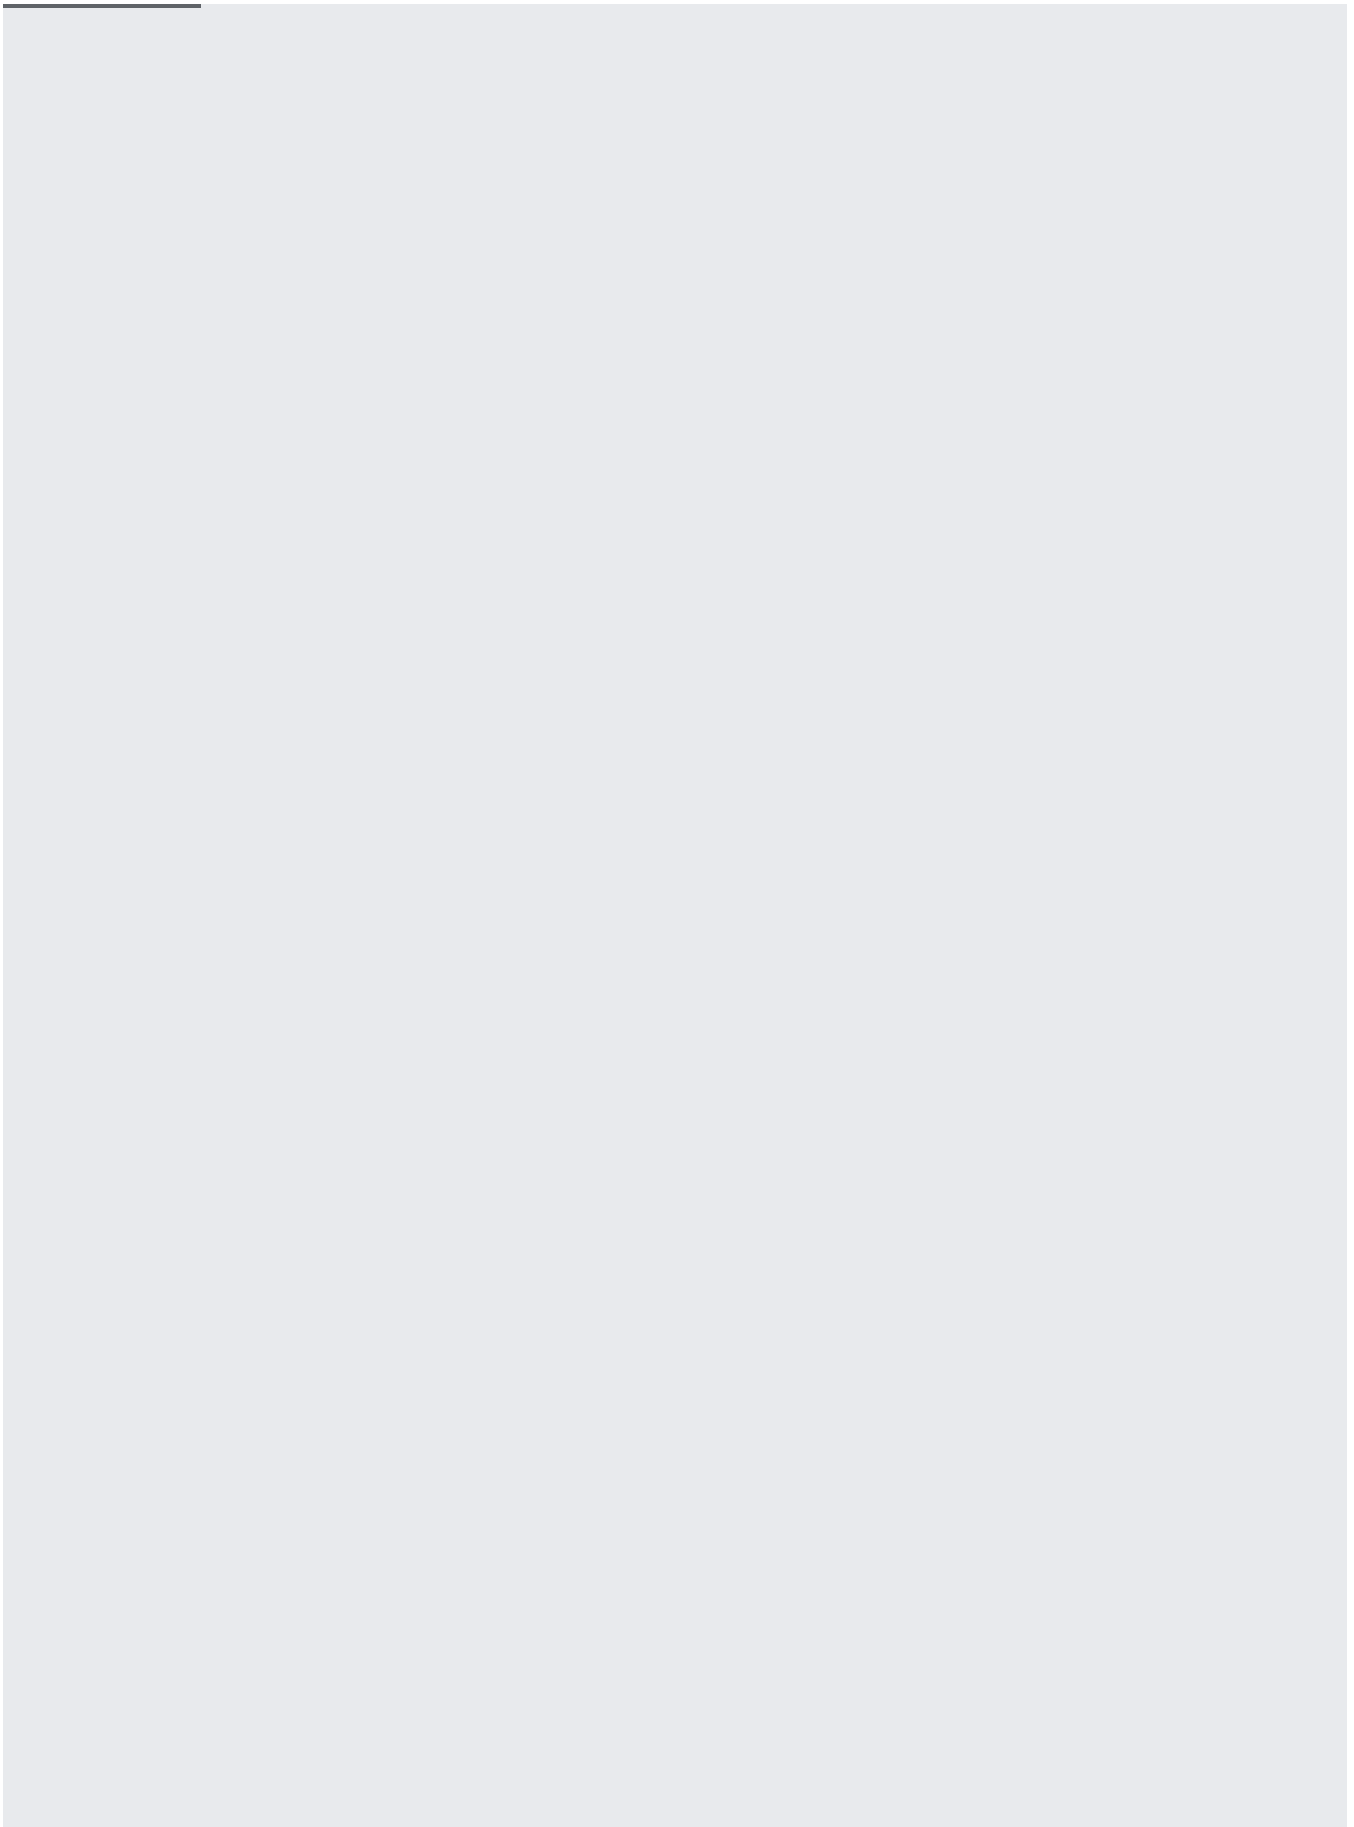

To delete an object from one of your Cloud Storage buckets:

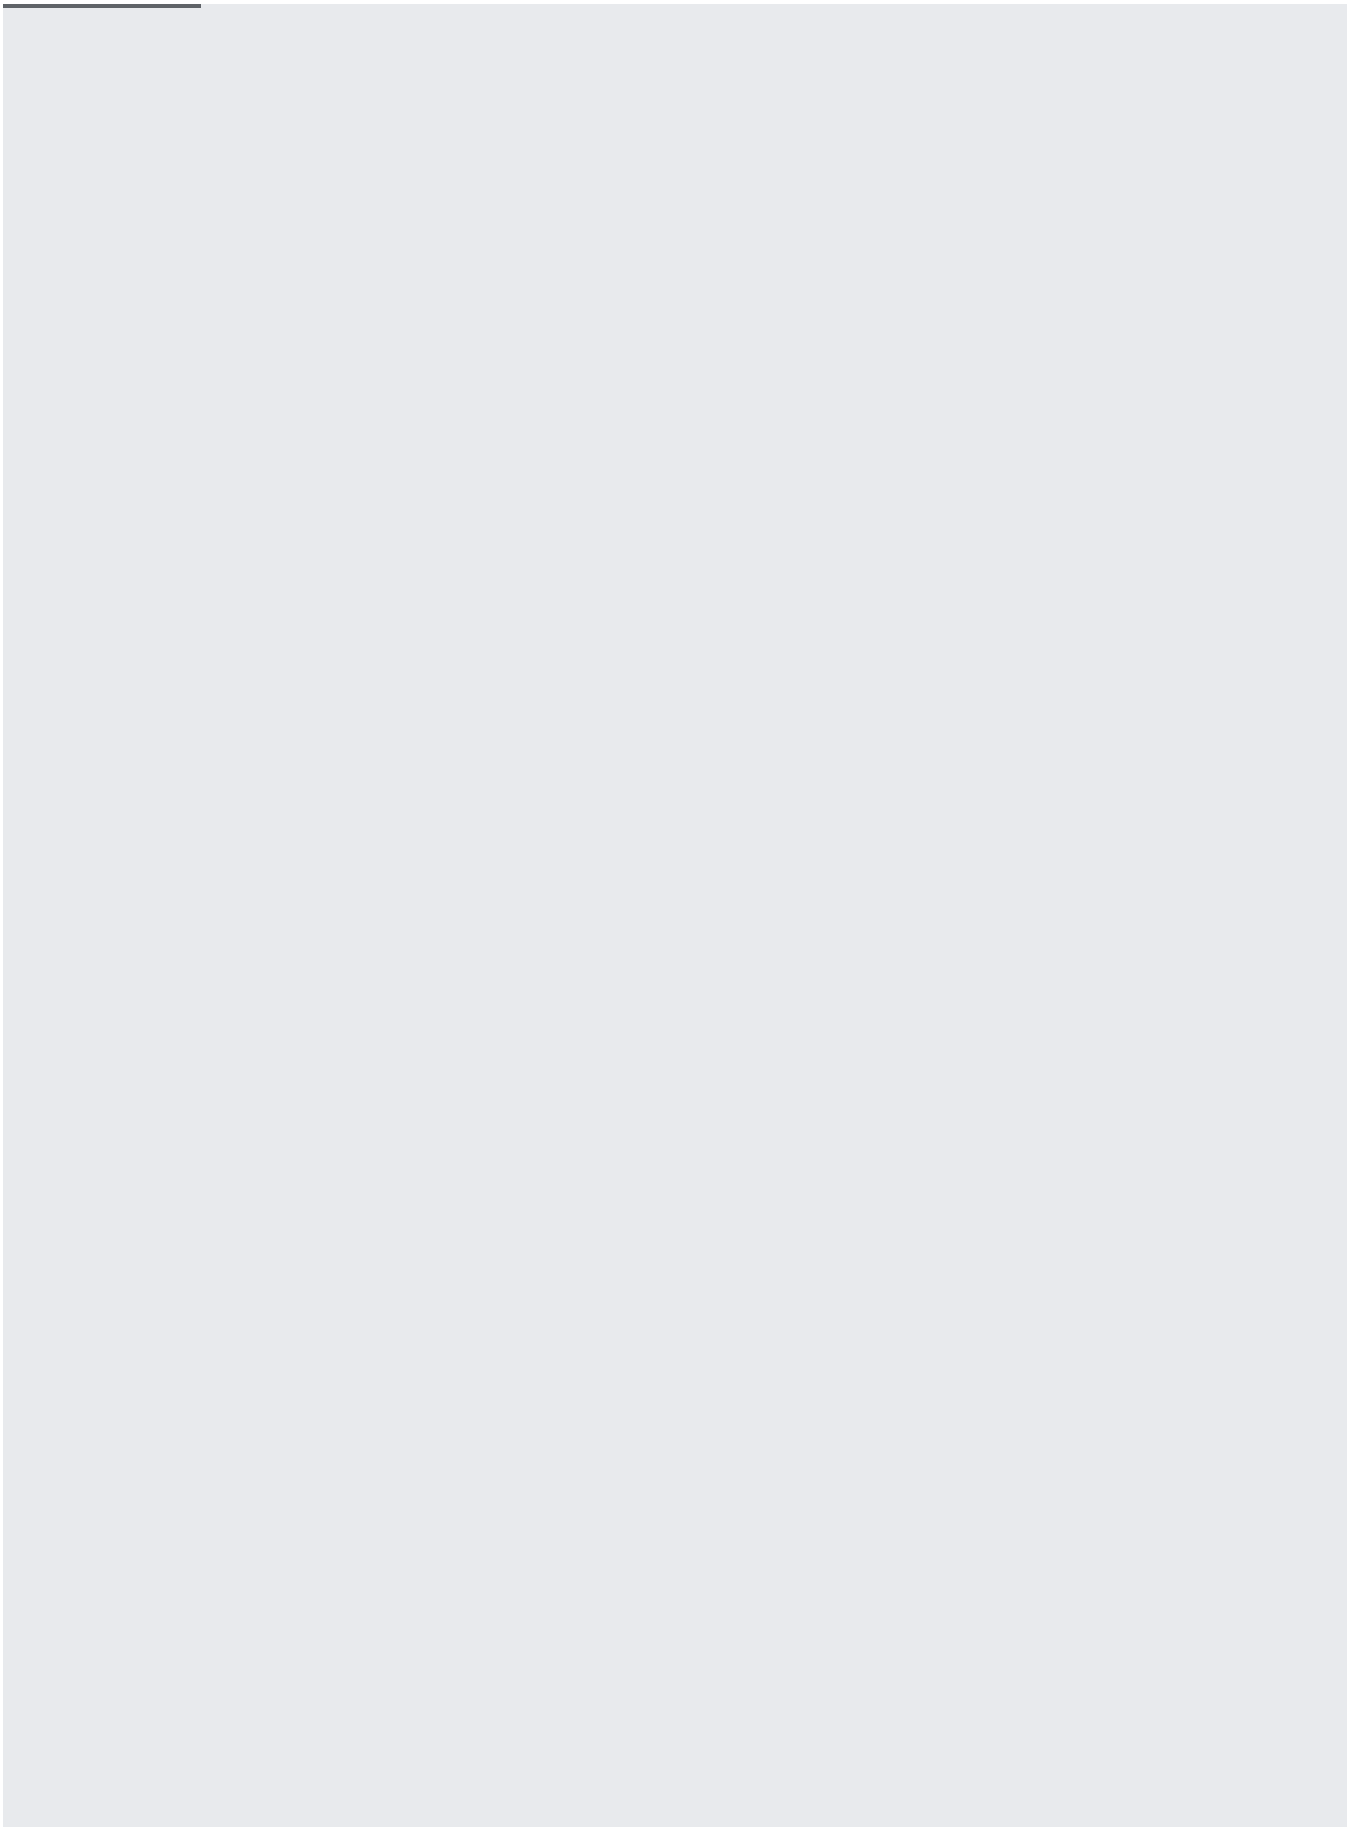

- [Learn about Object Versioning \(/storage/docs/best-practices#deleting\)](/storage/docs/best-practices#deleting).
- [Learn about Object Lifecycle Management \(/storage/docs/lifecycle\)](/storage/docs/lifecycle).
- [Delete a bucket \(/storage/docs/deleting-buckets\)](/storage/docs/deleting-buckets).
