

[Job Search documentation](#)

SearchMode

A string-represented enumeration of the job search mode. The service operate differently for different modes of service.

Enums	
SEARCH_MODE_UNSPECIFIED	The mode of the search method isn't specified. The default search behavior is identical to JOB_SEARCH search behavior.
JOB_SEARCH	The job search matches against all jobs, and featured jobs (jobs with promotionValue > 0) are not specially handled.
FEATURED_JOB_SEARCH	The job search matches only against featured jobs (jobs with a promotionValue > 0). This method doesn't return any jobs having a promotionValue <= 0. The search results order is determined by the promotionValue (jobs with a higher promotionValue are returned higher up in the search results), with relevance being used as a tiebreaker.
