

After having successfully trained your model, you can translate content using the [Cloud Translation API v3beta1 \(/translate/docs/translating-text-v3#automl-model\)](#) `translateText` method. The Cloud Translation API v3beta1 supports using [glossaries \(/translate/docs/glossary\)](#) and [Batch translation requests \(/translate/docs/batch-translation\)](#).

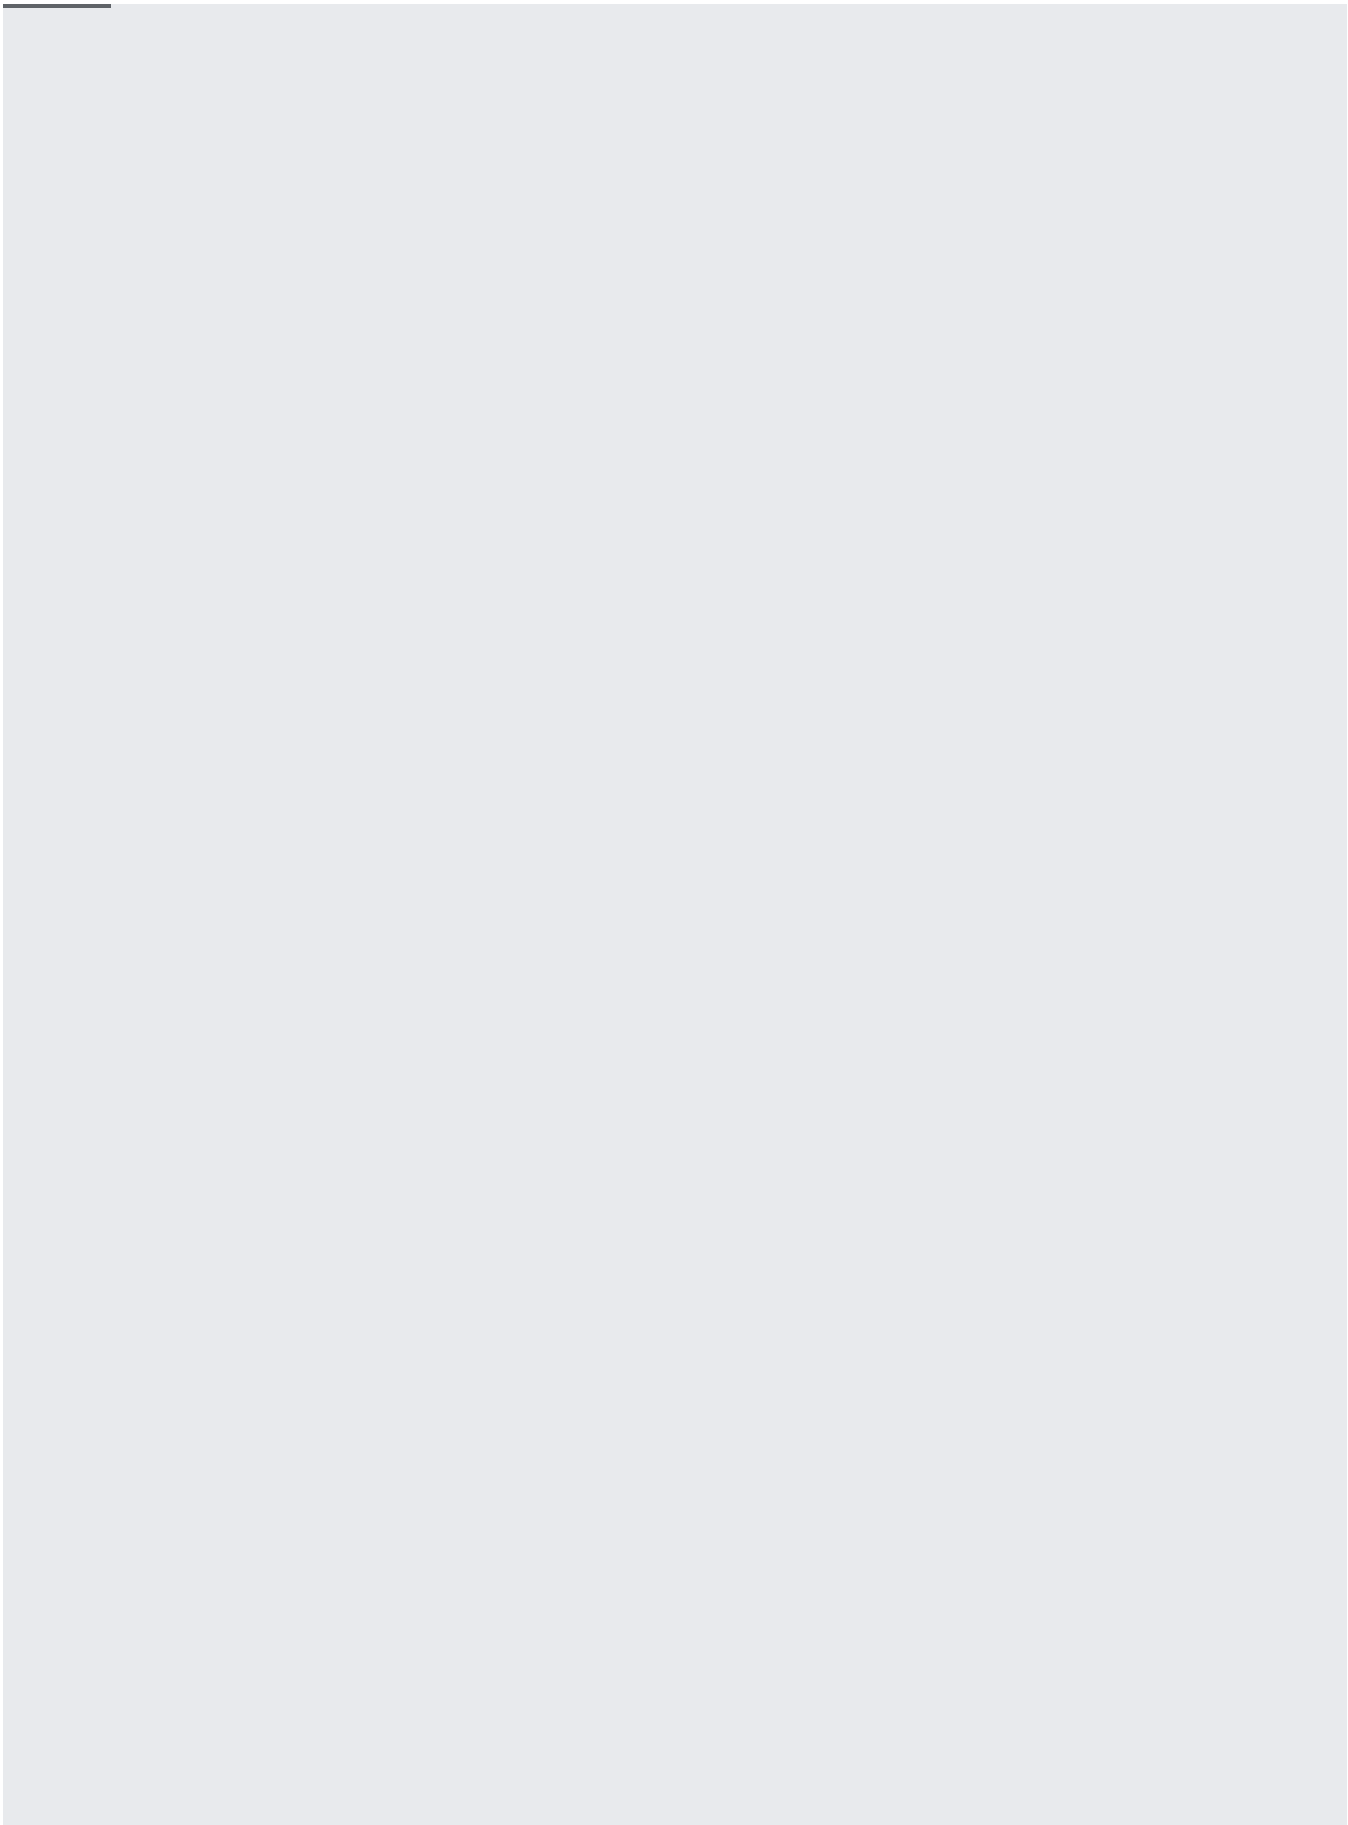

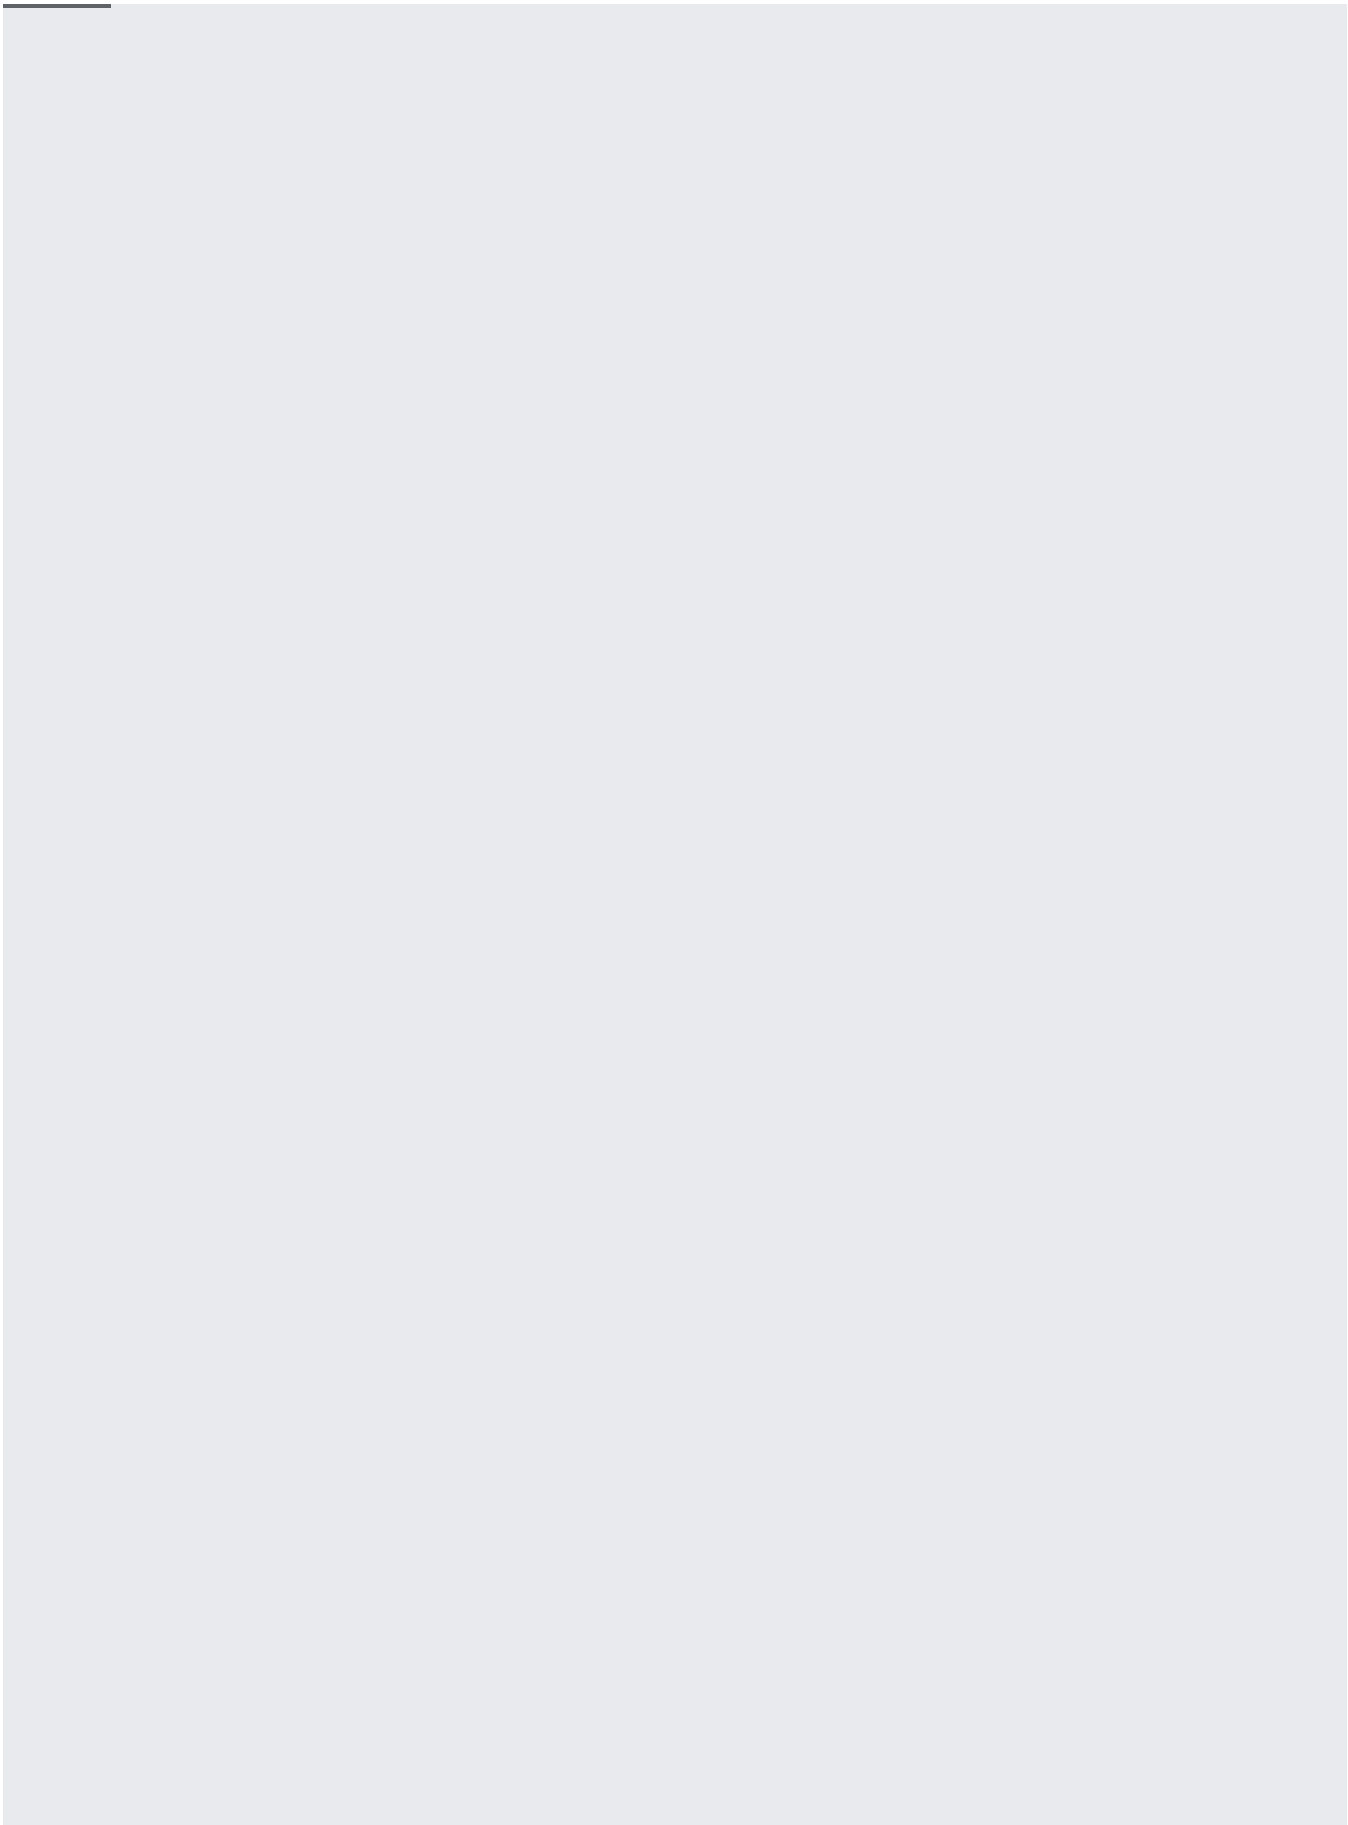

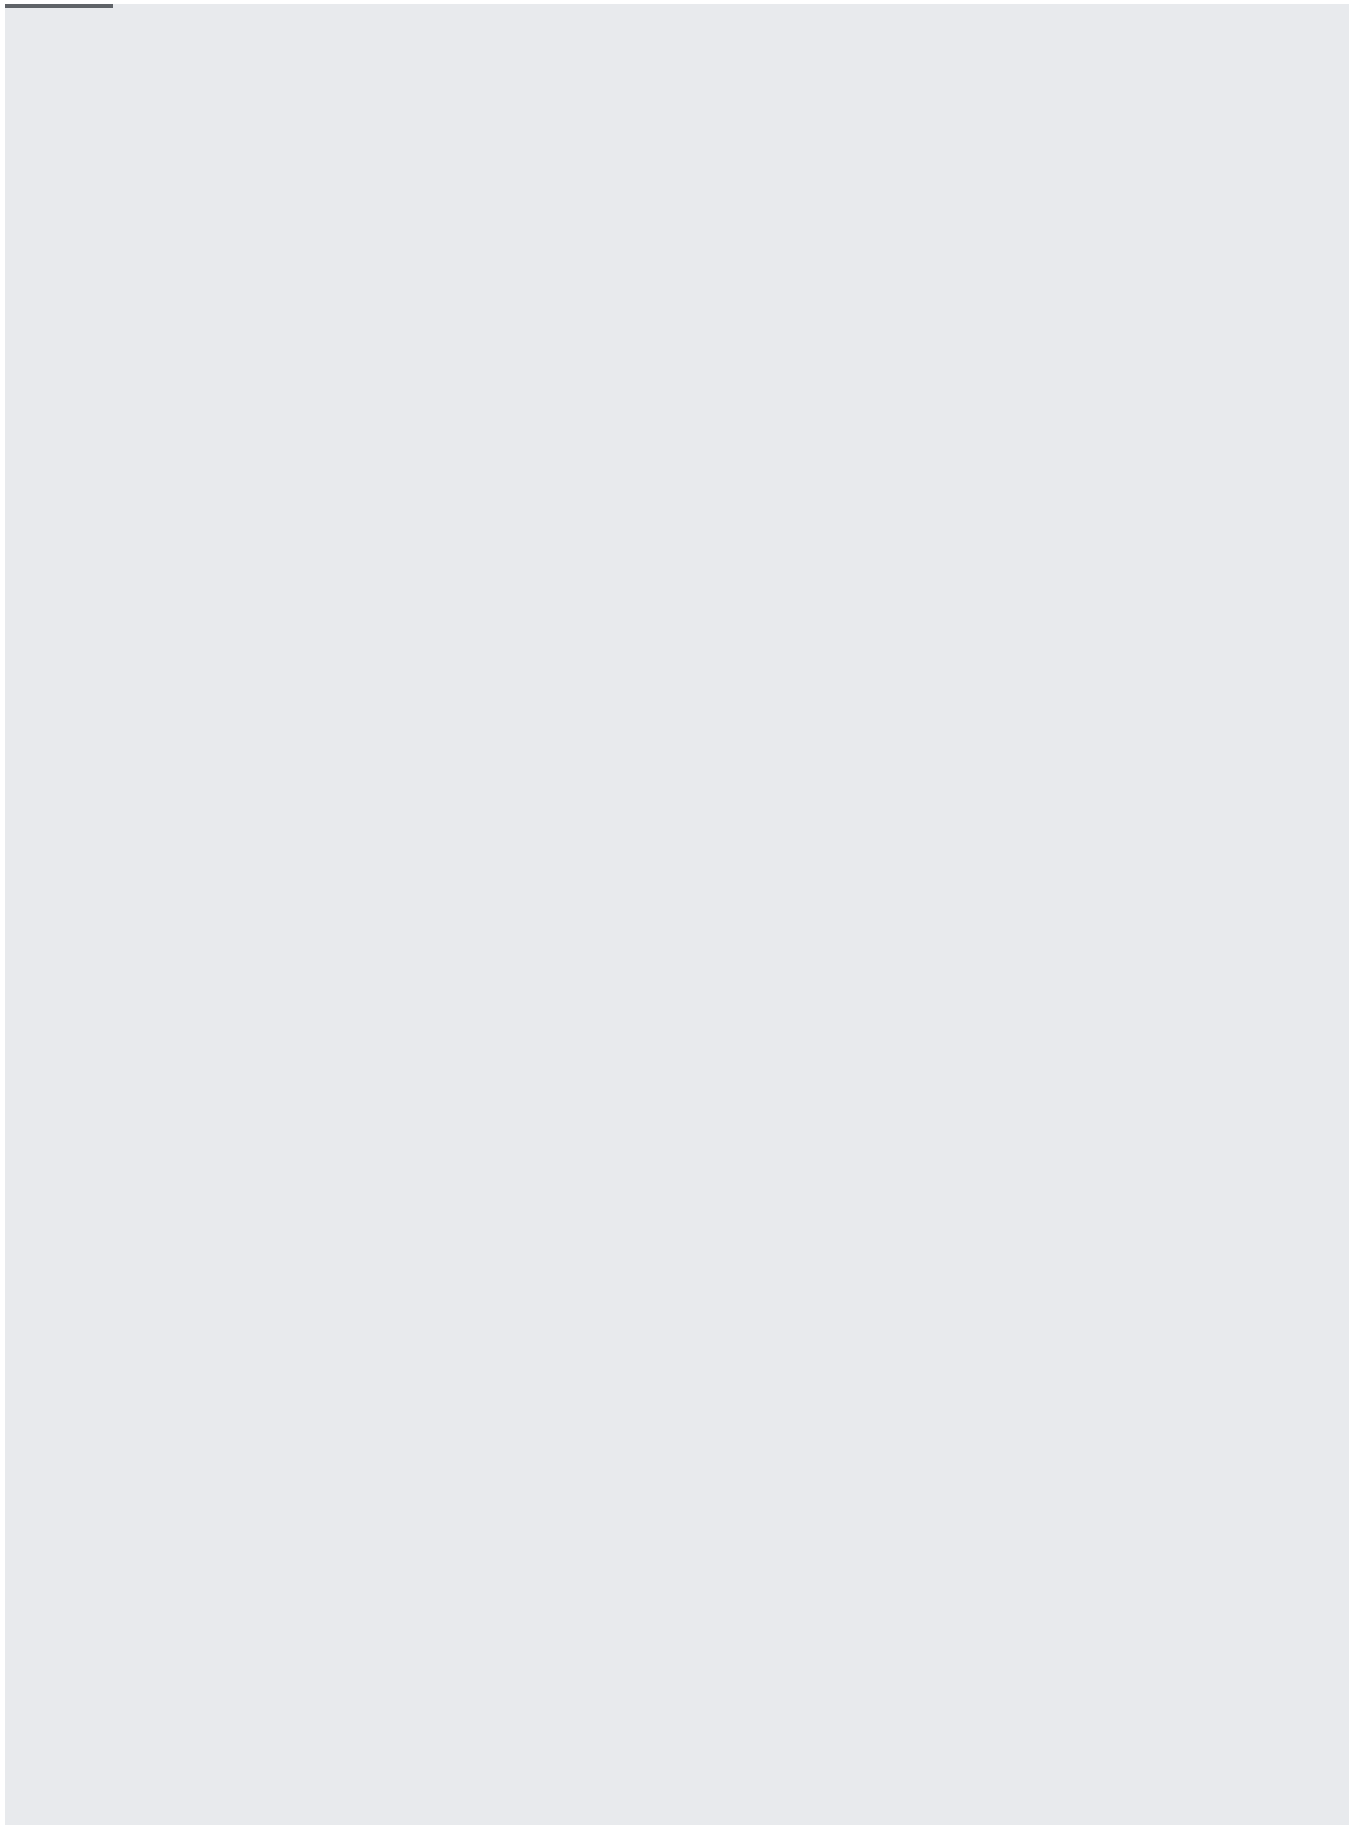

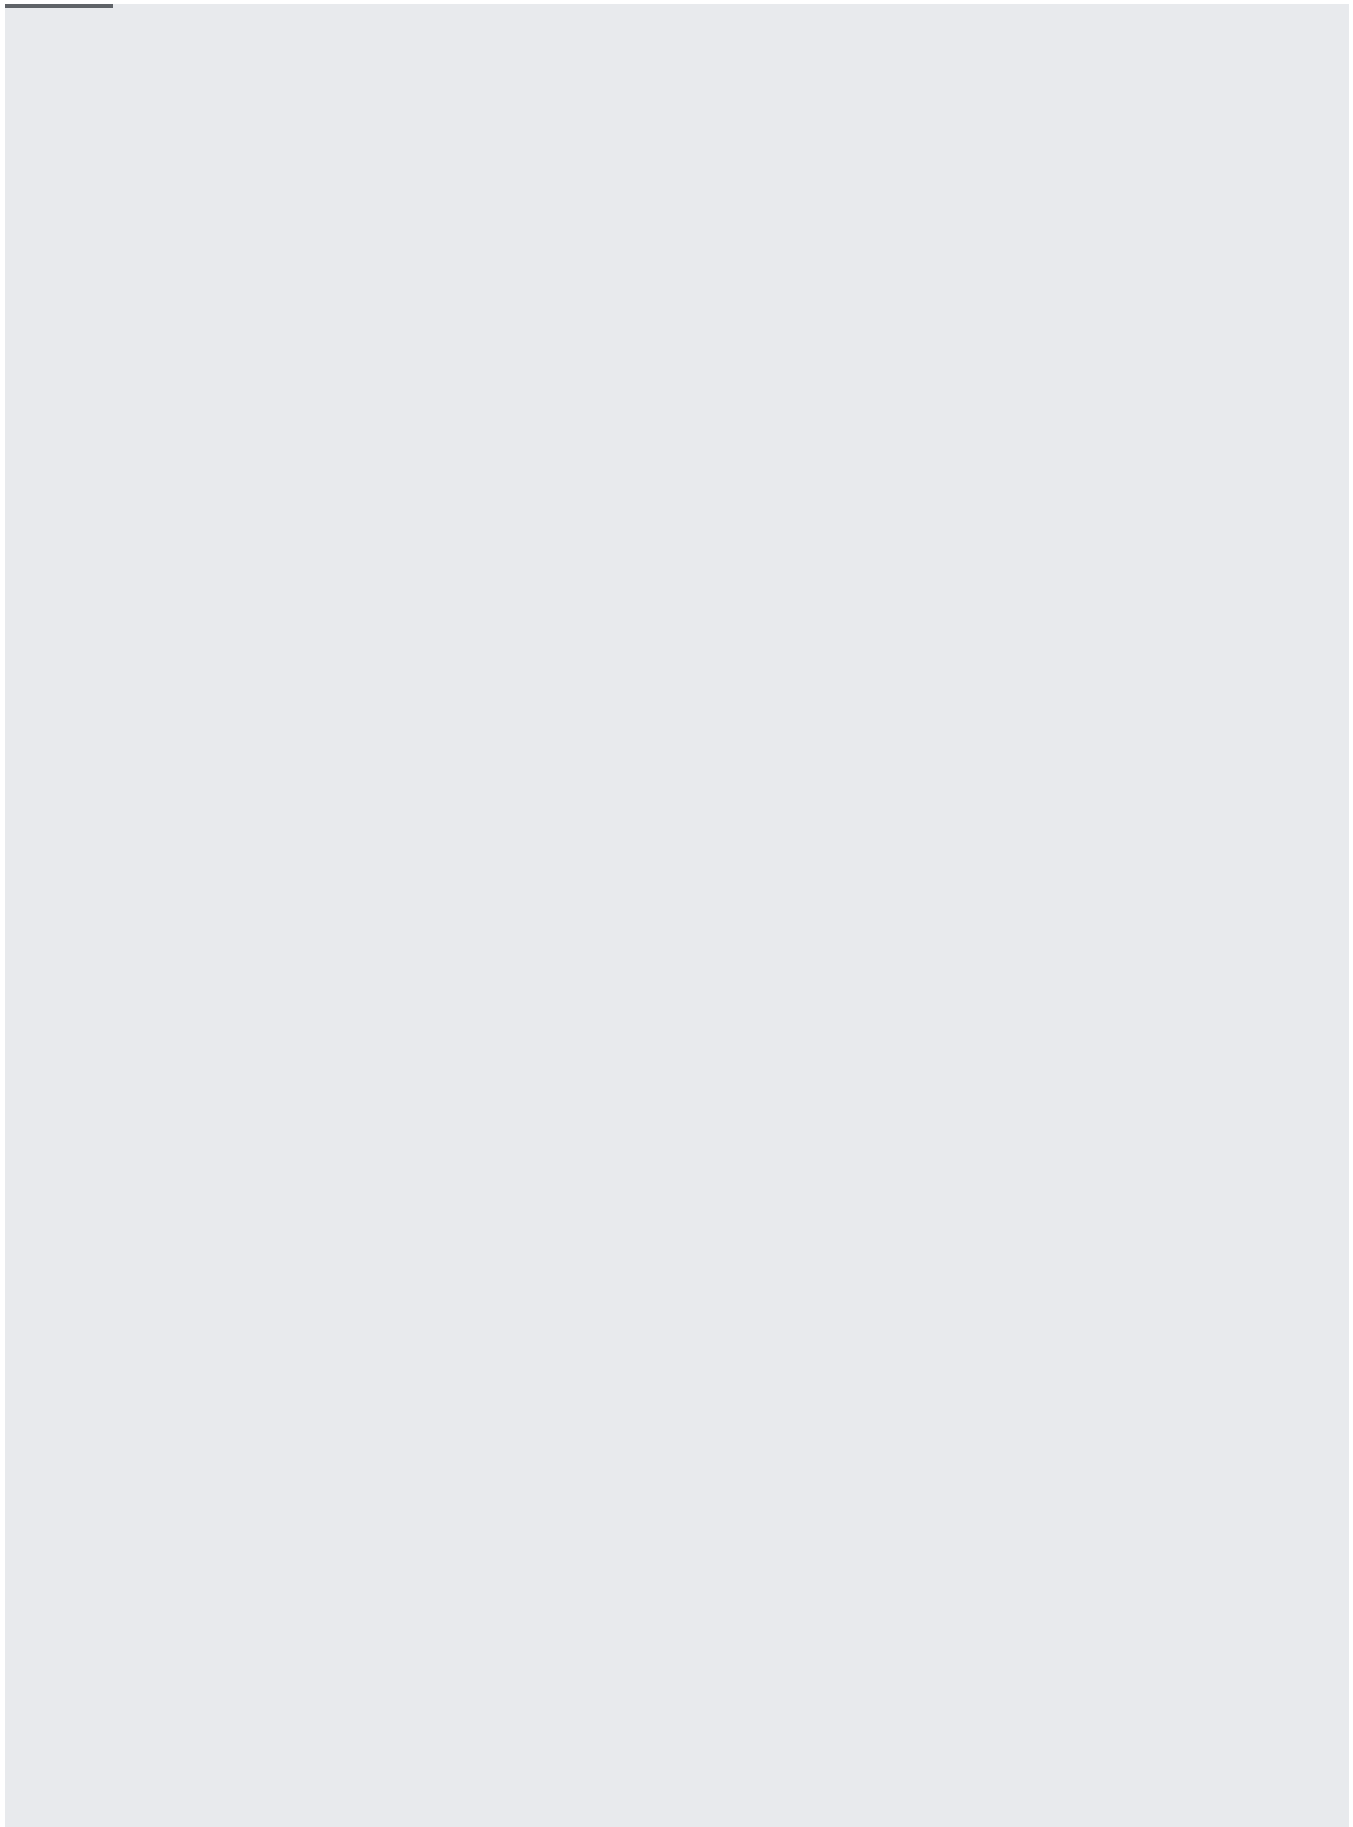

You can also use the AutoML API to translate content with your custom model, as shown in the following example.
