

Cloud Translation can dynamically translate text between thousands of language pairs. Translation lets websites and programs programmatically integrate with the translation service.

Translation is offered in various [Editions](/translate/docs/editions) (/translate/docs/editions) (Basic and Advanced) with their own pricing plans.

In addition to translating text, detecting source language, and getting a list supported languages, the Advanced edition also supports [Custom glossaries](/translate/docs/advanced/glossary) (/translate/docs/advanced/glossary), [Batch translation](/translate/docs/advanced/batch-translation) (/translate/docs/advanced/batch-translation), [AutoML models](/translation/docs/advanced/translating-text-v3#automl-model) (/translation/docs/advanced/translating-text-v3#automl-model), [Labels](/translation/docs/advanced/labels) (/translation/docs/advanced/labels).
