Method: projects.locations.models.undeploy

Undeploys a model. If the model is not deployed this method has no effect.

Only applicable for Image Object Detection and Image Classification; all other domains manage deployment automatically.

Returns an empty response in the **response** (https://cloud.google.com/vision/automl/docs/reference/rest/v1beta1/projects.locations.operations#Operation.FIELDS.response) field when it completes.

HTTP request

POST `https://automl.googleapis.com/v1beta1/{name}:undeploy`

Path parameters

Parameters	
name	`string` Resource name of the model to undeploy. Authorization requires the following Google IAM (https://cloud.google.com/iam) permission on the specified resource **name**: • `automl.models.undeploy`

Request body

The request body must be empty.

Response body

If successful, the response body contains an instance of `Operation` (https://cloud.google.com/vision/automl/docs/reference/rest/v1beta1/projects.locations.operations#Operation)

.

Authorization Scopes

Requires the following OAuth scope:

- `https://www.googleapis.com/auth/cloud-platform`

For more information, see the Authentication Overview (https://cloud.google.com/docs/authentication/).
