

[Cloud AutoML Vision Object Detection](#)

Method: projects.locations.operations.cancel

Starts asynchronous cancellation on a long-running operation. The server makes a best effort to cancel the operation, but success is not guaranteed. If the server doesn't support this method, it returns `google.rpc.Code.UNIMPLEMENTED`. Clients can use [Operations.GetOperation](#) (<https://cloud.google.com/vision/automl/object-detection/docs/reference/rest/v1beta1/projects.locations.operations/get#google.longrunning.Operations.GetOperation>)

or other methods to check whether the cancellation succeeded or whether the operation completed despite cancellation. On successful cancellation, the operation is not deleted; instead, it becomes an operation with an [Operation.error](#)

(<https://cloud.google.com/vision/automl/object-detection/docs/reference/rest/v1beta1/projects.locations.operations#Operation.FIELDS.error>)

value with a [google.rpc.Status.code](#)

(<https://cloud.google.com/vision/automl/object-detection/docs/reference/rest/v1beta1/projects.locations.operations#Status.FIELDS.code>)

of 1, corresponding to `Code.CANCELLED`.

HTTP request

POST <https://automl.googleapis.com/v1beta1/{name}:cancel>

Path parameters

Parameters	
name	string The name of the operation resource to be cancelled.

Request body

The request body must be empty.

Response body

If successful, the response body will be empty.

Authorization Scopes

Requires the following OAuth scope:

- <https://www.googleapis.com/auth/cloud-platform>

For more information, see the [Authentication Overview](#)

(<https://cloud.google.com/docs/authentication/>).
